May 2020

Hierarchical GraphBLAS In-Memory Database Performance

- High performance streaming network analysis requires
 - High level programming environments
 - Rapid interaction and fast turnaround
- MIT SuperCloud optimizes every aspect of HPDA system to enable
 - 34,000+ hierarchical GraphBLAS in-memory databases
 - 1000+ servers
 - Launched in seconds
- Achieves 75 billion updates/seconds
 - Smashes prior Hierarchical D4M world record of 1.9 billion inserts/second¹
 - 10,000x faster than standard databases
 - 20x the packet rate of projected 2022 North American non-Video Internet*

Hierarchical GraphBLAS Arrays

fast memory

slow memory

$$\mathbf{A} + \boxed{\mathbf{A}_1}$$

Hierarchical GraphBLAS Arrays

$$\mathbf{A} + \boxed{\mathbf{A}_1}$$

$> c_1$

Hierarchical GraphBLAS Arrays

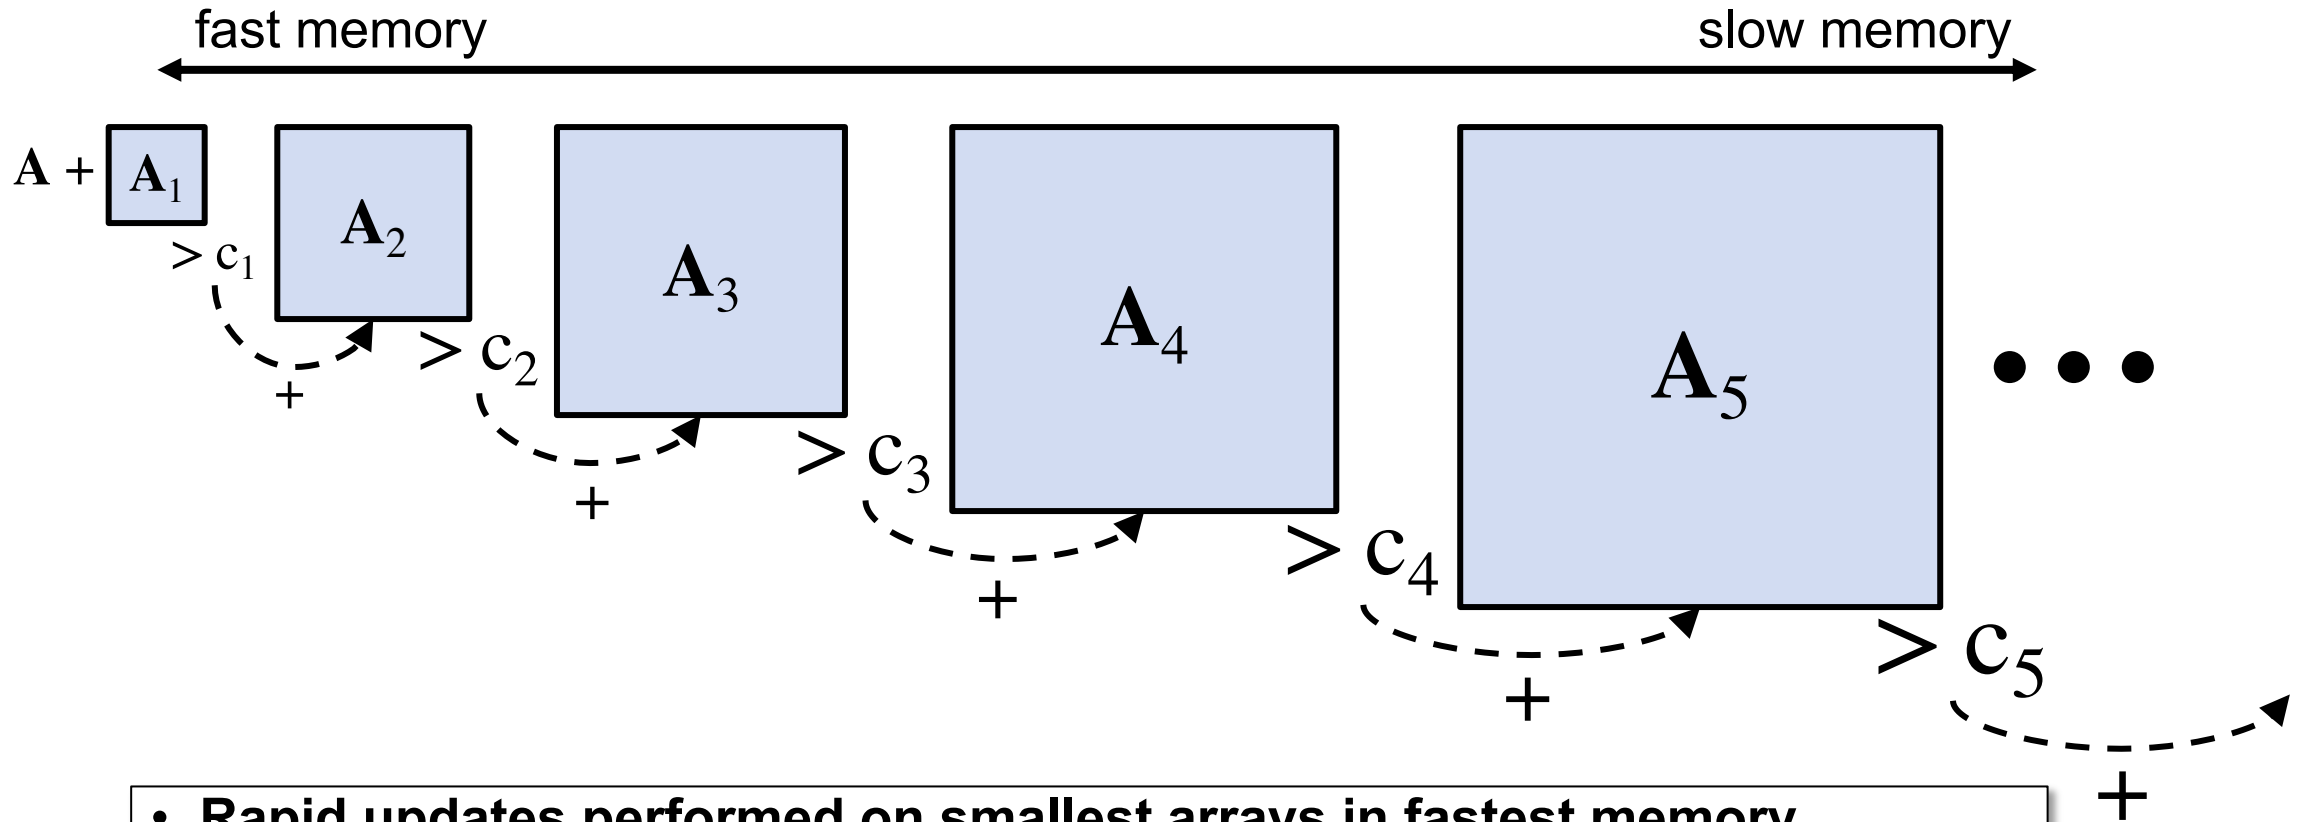

Hierarchical GraphBLAS Arrays

Hierarchical GraphBLAS Arrays

- Rapid updates performed on smallest arrays in fastest memory
- If number of entries exceeds c_i , then A_i is added to A_{i+1} and A_i is cleared
- Dramatically reduces the number of updates to slow memory
- Upon query, all are summed into largest array
